This flu season, ask for 4-strain protection.

Ask for FLUCELVAX QUADRIVALENT.

An annual flu shot is the single best way to help protect yourself and those around you against the flu. For people ready to get vaccinated this flu season, ask for FLUCELVAX QUADRIVALENT.

FLUCELVAX QUADRIVALENT is a vaccine that helps protect against influenza A and B for people aged 4 and older. Vaccination with FLUCELVAX QUADRIVALENT may not protect all people who receive the vaccine.

Who should not get FLUCELVAX QUADRIVALENT?

Do not administer FLUCELVAX QUADRIVALENT to anyone with a history of severe allergic reaction (e.g. anaphylaxis) to any component of the vaccine.

Who may you administer FLUCELVAX QUADRIVALENT?

Tell your healthcare provider if you:

• Have a weakened immune system (due to cancer, surgery, medicines, or illness)
• Have had severe reactions to flu shots in the past
• Have ever fainted after receiving an injection
• Have ever had a severe allergic reaction

What are the most common side effects of FLUCELVAX QUADRIVALENT?

• Fever
• Headache
• Muscle aches

• Nausea 

These are not all of the possible side effects of FLUCELVAX QUADRIVALENT. You can ask your healthcare provider for a complete list of reported side effects.

Ask your healthcare provider for advice about any side effects that concern you. You may report side effects to the Vaccine Adverse Events Reporting System (VAERS) by calling 1-800-822-7967 or by going to http://vaers.hhs.gov.

A process that’s transforming flu shot manufacturing

Pen many decades, conventional flu vaccines have been produced using chicken eggs. FLUCELVAX QUADRIVALENT is made entirely using cell culture technology instead. Cell culture technology has been used for many years to make other types of vaccines, including hepatitis B, rabies, and yellow fever vaccines. FLUCELVAX is the first potential to be tested in early trials, where many flu shots are currently, which would benefit both the public and for researchers or pharmaceuticals.12

FLUCELVAX QUADRIVALENT is made in the USA. With support from the US government, a new flu vaccine manufacturing facility was built in Holly Springs, North Carolina specifically to make cell culture-based flu vaccines. This facility was built in Holly Springs, North Carolina specifically to make cell culture-based flu vaccines. This facility can help ensure that flu shots are available when needed.

Selected Important Safety Information

Who may not be able to get FLUCELVAX QUADRIVALENT?

Tell your healthcare provider if you:

• Have ever had a serious allergic reaction (e.g., anaphylaxis) after getting a flu shot
• Have had a severe reaction after receiving an injection

The flu is serious!

A study of 31 flu seasons in the United States from 1976 to 2007 the number of influenza-related deaths ranged from 4,000 to 49,000 during each flu season.11

An annual flu shot is the single best way to help protect yourself against the flu. Even though no vaccine is 100% protective, if you are not getting the flu after getting a flu shot, it may make your disease milder than if you had not gotten one at all.11

A flu shot cannot give you the flu.12

It’s important to get a flu shot every year because the strains responsible for disease can change every year.11

A flu shot helps protect people with chronic health conditions when they get sick with the flu.13

It’s based on getting a flu shot early in the season, but any time during the season can help.11

The flu can spread.12

The Centers for Disease Control and Prevention recommends a flu shot for everyone age 6 months and older.

The flu is serious!

4 STRAIN DEFENSE FOR AGES 4+

Don’t underestimate the consequences of flu

Although many people who get the flu recover within a week without requiring medical attention, some will suffer from a more severe disease or even death; especially if they are considered high-risk.12 People at high risk for complications from the flu are young children, older adults (65+), and people with certain medical conditions such as asthma, COPD, diabetes, and heart disease. Additionally, influenza can also increase the risk of flu-related complications.12

FLUCELVAX QUADRIVALENT is a flu vaccine for people aged 4 years and older that helps protect against 4 strains of the flu. FLUCELVAX QUADRIVALENT contains inactivated (dead) flu viruses. It helps protect against 3 strains of the flu.2

FLUCELVAX QUADRIVALENT is not approved for use in children younger than 4 years of age.
